If that's the case, should we all be worried that technology is leading the world towards this dystopian future? We are living in a profoundly different time

than any other in recent history. And the effects are already being seen around us. Consider this: no technology company offers a better "life ring" than Amazon to their current employees. Everything the average Amazon employee sees throughout the day is created by Amazon. Everything they think, feel, and dream about is another Amazon product. It's no wonder so many employees end up working until they're dead. What will the future look like? What are the things we will need or want to survive? The future technology will be a very different world than we live in today. This is true for the past, present, and future. So far, no doubt, the future will look more like today, but it will be a future without our current conceptions of digital technology. Let's consider

one specific aspect of technology that could completely change our future: Artificial Intelligence c6a93da74d
